SECTION LACQUERS FENICE AR0000 LT.1 VARIOUS COLORS

Resin-based coloured solutions used in finishing the edges of quality leather goods. These products are available in numerous versions.

Aqueous polymers solutions for the finishing of the edge of the leather of bags, belts, uppers and leather goods in general. They are available in various versions ranging from opaque to glossy. They also differ in viscosity and opacity to meet the different needs of customers. All versions are applicable both by hand and machine and dry quickly. The self-fixing property of the product is obtained by slow cross-linking of the film which achieves optimal performance after 48 hours from application. The heat, within certain limits, favors cross-linking and the consequent resistance to water.
